

Construction Cost Index Method: Commercial Construction 2010

The Mahoning County Building Department is pleased to provide the following Cost Construction Index Method for its customers. The Construction Cost Index Method (CCIM) provides the “average” construction costs per square foot, which is used to determine permit fees in Mahoning County. The Square Foot Construction Cost Table presents factors that reflect relative value of one construction classification/occupancy group to another so that more expensive construction is assessed greater permit fees than less expensive construction.

The International Code Council has developed data to aid jurisdictions in determining commercial permit fees. It is important to note that while the CCIM determines an estimated value of a building, it is only intended to determine permit fees. The data table is not intended to be an estimating guide because the data only reflects average costs and is not

representative of specific construction. The degree of precision is sufficient for the intended purpose, which is to establish consistent and equitable permit fees.

The CCIM provides Mahoning County with a simplified way to determine the estimated value of a building or structure that does not rely on the permit applicant to determine the cost of construction. Whether a specific project is bid at a cost above or below the computed value of construction does not affect the permit fee because the cost of related code enforcement activities is not directly affected by the bid process and results.

The bidding process for a particular job and other associated factors does not affect the value of construction for determining the permit fee.

Construction Cost Index Method

The permit fee is determined using the affected building gross area, square foot construction cost, and the base rate. The square foot construction cost is based upon a nationally recognized square foot construction cost table for commercial construction. It is the Building Official’s responsibility to annually review the construction cost table to determine and make adjustments if needed due to the operating demands of the department and economic conditions. Its implementation date is January 1 of each year.

The Mahoning County Building Department is a fee-for-service department. Since 1998, no tax revenues have been in the yearly budget.

$$\text{Affected Gross Building Area} \times \text{Square Foot Construction Cost} \times \text{Base Rate} = \text{Permit Fee}$$

The Square Foot Construction Cost Table on the back of this page represents average costs for most structures. Again, it should be noted that, when using this data, these are “average” costs based on typical construction methods for each occupancy group and type of construction. The average costs include structural, electrical, mechanical, interior finish and normal site preparation. The cost of land is not included in the square foot construction cost.

Base Rate

The Base Rate of 0.0025 per \$1,000 construction cost is established by the Board of Mahoning County Commissioners, and has remained unchanged since 1992.

Permit fee does not include other associated costs such as plan review fees, state assessment fees, or administrative fees.

Example

Step 1 Determine: Type of Construction— IIB; Use Group—B

Step 2 Locate cost per square foot using the type of construction and the use group on the Square Foot Construction Cost on the Table—\$136.34

Step 3 Determine Square Footage— 2 Stories (1st story 8,000 sq ft, 2nd story 8,000 sq. ft) = 16000 sq. ft.

Step 4 Determine Permit Fee using CCIM—

Affected Gross Building Area x Square Foot Construction Cost x Base Rate = Permit Fee*

$$16,000 \text{ sq. ft.} \times 136.34 \text{ per sq. ft.} \times 0.0025 = \$5,453.60^*$$

*Does not include other associated fees (i.e. plan review, administrative, etc.). See Building Department Fee Schedule

Notes:

A. Unfinished Basements (all use groups) = \$15.00 per sq. ft.

B. Shell buildings, deduct 20 percent.

C. Interiors use 30 percent.

D. Pre-engineered buildings use 75 percent.

E. Private Garages, Tents and Signs are Use Group Utility, miscellaneous

F. For projects not described above the Chief Building Official shall calculate the permit fee using the Building Department hourly rate, estimated time for services and/or actual cost for any contracted services.
